Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1.   (currently amended) A method for modifying a markup language document, the method comprising:

receiving the markup language document at an intermediary server, the markup language document having at least one script portion including at least one link to a resource; and

modifying the at least one link within the script portion of the markup language document to link to the intermediary server, where the modifying includes:

scanning the markup language document to locate the script portion,

searching the script portion to locate a hostname,

producing a replacement hostname for the located hostname, and

replacing the located hostname with the replacement hostname.

2.   (previously presented) A method as recited in claim 1, wherein the markup language document is being requested by a client, the method being performed at the intermediary server, and further comprising:

delivering the markup language document to the client after modifying the at least one link.

3. (original) A method as recited in claim 1, wherein the markup language document is a HTML document.

4. (canceled)

5. (currently amended) A method as recited in claim [[4]] 1, wherein the located hostname is associated with one or more remote servers, and the replacement hostname is associated with the intermediary server.

6. (previously presented) A method as recited in claim 5, wherein the located hostname is part of the at least one link.

7. (previously presented) A method as recited in claim 6, wherein the at least one link is a Universal Resource Locator for a resource.

8. (original) A method as recited in 5, wherein the markup language document is a HTML document.

9. (previously presented) A method as recited in claim 1, wherein a hostname is associated with a remote server.

10-19. (canceled)

20. (currently amended) A tangibly-embodied computer readable media including at least computer program code for modifying a markup language document, said tangibly-embodied computer readable media comprising:

computer program code for receiving the markup language document at an intermediary server, the markup language document having at least a script portion including at least one link to another resource; and

computer program code for modifying the at least one link within the script portion of the markup language document to link to the intermediary server, where the computer program code for modifying includes:

computer program code for scanning the markup language document to locate the script portion,

computer program code for searching the script portion to locate a hostname,

computer program code for producing a replacement hostname for the located hostname, and

computer program code for replacing the located hostname with the replacement hostname.

21. (canceled)

22.   (currently amended) The <u>tangibly-embodied</u> computer readable media of claim 20, wherein the markup language document is being requested by a client, the computer program code being performed at the intermediary server, and the computer readable media further comprising:

computer program code for delivering the markup language document to the client after said modifying the at least one link.

23.   (currently amended) The <u>tangibly-embodied</u> computer readable media of claim 20, wherein the markup language document is a HTML document.

24.   (canceled)

25.   (currently amended) The <u>tangibly-embodied</u> computer readable media of claim [[24]] <u>20</u>, wherein the located hostname is associated with one or more remote servers, and the replacement hostname is associated with the intermediary server.

26.   (currently amended) The <u>tangibly-embodied</u> computer readable media of claim 25, wherein the located hostname is part of the at least one link.

27.   (currently amended) The <u>tangibly-embodied</u> computer readable media of claim 26, wherein the at least one link is a Universal Resource locator for a resource.

28.   (currently amended) The tangibly-embodied computer readable media of claim 25, wherein the markup language document is a HTML document.

29.   (currently amended) The tangibly-embodied computer readable media of claim 20, wherein a hostname is associated with a remote server.

30-34. (canceled)

35.   (currently amended) A tangibly-embodied computer readable media including computer program code that, when executed by at least one processor in an intermediary server, performs a method for processing requests, the tangibly-embodied computer readable media comprising:

computer program code for receiving, at the intermediary server, a request from a client device for an item;

computer program code for determining whether the item is a hyper text markup language (HTML) document;

computer program code for forwarding the item to the client device when the item is determined not to be a HTML document;

computer program code for performing, when the item is determined to be a HTML document, at least one of inserting a toolbar into the HTML document or replacing a uniform resource locator (URL) within the HTML document with a

replacement URL to produce a modified HTML document, where the computer program code for replacing a URL includes:

computer program code for scanning the HTML document to locate a script portion,

computer program code for searching the script portion to locate a hostname,

computer program code for producing a replacement hostname for the located hostname, and

computer program code for replacing the located hostname with the replacement hostname; and

computer program code for forwarding the modified HTML document to the client device.

36.   (currently amended) The tangibly-embodied computer readable media of claim 35 further comprising:

computer program code for saving the modified HTML document for later retrieval by the client device.

37.   (canceled)
